

Entering the Open RAN Market

DENGYO Technology will be focusing on promoting Open RAN and provide cutting-edge wireless products.

April 26, 2022, Tokyo, Japan – Nihon Dengyo Kosaku Co., Ltd. (DENGYO), has announced the establishment of DENGYO Technology (DGT) in September, 2021. This new subsidiary plans to promote continued collaboration in the Open RAN ecosystem by providing best-in-class hardware products to meet the demands of growing local wireless networks. Open RAN technologies enable network operators to build Radio Access Networks flexibly and economically by combining optimal equipment that meet the needs of end users, such as mobile carriers and wireless equipment vendors, in the global market.

Beginning this year, DGT will continue to provide products with high quality and high reliability that comply with Open RAN specifications in response to the diversifying needs of services and solutions required for 5G in the future. DGT will provide cost-effective, compact, lightweight products to mobile carriers and local 5G Enterprise users. These products will be deployable in a wide variety of indoor environments where high throughput & capacity is needed. These Open RAN products will make it possible to provide flexible networks and systems that meet the needs of required services and solutions. DGT plans on continuing involvement in the Open RAN ecosystem and will be actively promoting the interconnection and operation between vendors to drive for the adoption of Open RAN products.
